

Atomic Design System Manual

Project: Pangasinan Heritage Digital Showcase

Purpose

This explains the reusable parts in the project. The source code is in `source-code/pangasinan-heritage`.

Atoms

The required atoms are Button, Typography, Color Tokens, Icon, and Image. They are in `components/atoms`. Button is used for the search action. Image displays the place pictures. Typography shows text. Color Tokens stores colors. Icon shows a small symbol.

Molecules

The required molecules are Heritage Card, Search Form, and Navigation Item. They are in `components/molecules`. Heritage Card shows one place. Search Form has the search box and button. Navigation Item is used for menu links.

Organisms

The required organisms are Heritage Grid and Header Navigation. They are in `components/organisms`. Heritage Grid shows many place cards. Header Navigation has the project name and menu links.

Visual Preview and Usage

The components can be seen on the Home, Places, About, and place detail pages. Cards are used to show destinations. The search form is used on the Places page. The header is used on every page.

Responsive Design

The website starts with a phone layout. Bigger screens show two or three columns. Text uses clamp and the grid uses container queries.

Accessibility

Images have alt text. The search box has a label. The navigation has a label. The cards are links and can be used with a keyboard.

Code Locations

Atoms: `components/atoms`. Molecules: `components/molecules`. Organisms: `components/organisms`. Data: `data/heritage.js`. Styles: `app/globals.css`. Pages: `app`.
